UNIVERSITY OF HAWAII LIBRARY

Computers and Biomedical Research

AN INTERNATIONAL JOURNAL

An Official Publication of the American Association for Medical Systems and Informatics

Endorsed by the American College of Medical Informatics

EDITOR: Homer R. Warner

EDITORIAL BOARD:

Hiroshi Abe
G. Octo Barnett
Morris F. Collen
Jerome R. Cox, Jr.
James F. Fries
David Garfinkel
William E. Hammond
Hubert Pipberger
Arnold W. Pratt
T. Allan Pryor
Edward H. Shortliffe
William W. Stead
Ove B. Wigertz
William S. Yamamoto

No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1988 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 21

Number 1, February 1988

Hiroshi Furutani, Koji Yamamoto, Hisakazu Ogura, and Yasuhiro Kitazoe. New Control Chart for Multivariate Data with Missing Values 1

Gerard E. Dallal. PITMAN: A FORTRAN Program for Exact Randomization Tests 9

Ted D. Wade, Stewart J. Anderson, Jessica Bondy, V. A. Ramadevi, Richard H. Jones, and George D. Swanson. Using Smoothing Splines to Make Inferences about the Shape of Gas-Exchange Curves 16

Glenn L. Irion, Marla R. Wolfson, and Mark S. Alsberge. Computerized Stripping Method for Multiple Nuclide Microsphere Studies 27

John W. Gamel, Richard A. Greenberg, and Ian W. McLean. A Stable Linear Algorithm for Fitting the Lognormal Model to Survival Data 38

Chap T. Le and Bruce L. Lindgren. Computational Implementation of the Conditional Logistic Regression Model in the Analysis of Epidemiologic Matched Studies 48

Mihoko Okada and Masahiko Okada. Prolog-Based System for Nursing Staff Scheduling Implemented on a Personal Computer 53

Perry L. Miller, Kenneth W. Barwick, Jon S. Morrow, Seth M. Powsner, and Caroline A. Riely. Semantic Relationships and Medical Bibliographic Retrieval: A Preliminary Assessment 64

Warner V. Slack, Alan Leviton, Susan E. Bennett, Katharine H. Fleischmann, and Robert S. Lawrence. Relation between Age, Education, and Time to Respond to Questions in a Computer-Based Medical Interview 78

Özcan Özdamar, D. Kimbrough Oller, Edward Miskiel, and Rebecca Eilers. Computer System for Quantitative Evaluation of an Electrotactile Vocoder for Artificial Hearing 85

Number 2, April 1988

Al-Said A. Haffor and James B. Nail. Microprocessor-Controlled Mixing System for Rebreathing Equilibration 101

T. Sundqvist, K.-E. Magnusson, and C. Tagesson. Characterization of Size-Dependent Exchange of PEG Molecules between the Blood and Extravascular Space in the Pig 110

Robert R. Rawlings, Michael J. Eckardt, and Henri Begleiter. Multivariate Spectral Methods for the Analysis of Event-Related Brain Potentials 117

GERARD E. DALLAL. RCJOIN: A FORTRAN Program for Isolating Sources of Interaction in Two-Way Tables of Counts 129
MIGUEL A. L. NICOLELIS AND LUIZ ANTONIO BACCALA. Time Series Analysis of Rhythmic Bacterial Resistance Development to Antibiotics 137
KRISTIAN LINNET. On the Sensitivity of Linear Discriminant Analysis to Sampling Variation and Analytical Errors 158
EVLIN L. KINNEY, DAVID BRAFMAN, AND ROBERT J. WRIGHT II. An Expert System on the Diagnosis of Ascites 169
MARCIA B. LEAVITT AND JOHN B. NEWELL. An Image Filing System for the Implementation of Image Processing Algorithms in a Research Environment 174
MARY LEDWITH AND ALLEN R. MYERS. A Database Management System for Residency Applicant Files 186
J. B. BASSINGTHWAIGHTE, I. S. CHAN, AND A. A. GOLDSTEIN. An Efficient Method for Smoothing Indicator–Dilution and Other Unimodal Curves 192

NUMBER 3, JUNE 1988

ATHANASSIOS ILIADIS, RENÉ BRUNO, AND JEAN-PAUL CANO. Dynamical Dosage Regimen Calculations in Linear Pharmacokinetics 203
PATRIZIA CIARLINI AND PIERO BARONE. A Recursive Algorithm to Compute the Baseline Drift in Recorded Biological Signals 221
J. RICHARD SPEARS, TAMAS SANDOR, WILLIAM HANLON, I. NIGEL SINCLAIR, LESLIE JAMES, AND GERALD MINERBO. Computerized Axial Tomographic Reconstruction of Coronary Tree Cross Sections from a Small Number of Cineradiographic Views 227
R. L. REEP AND W. J. CREEGAN. An Accurate Method for Automated Counting of Silver Grains in Autoradiographs 244
ALAN T. LEFOR, SETH M. STEINBERG, AND ERIC A. WIEBKE. Analysis of Chromium-51 Release Assay Data Using Personal Computer Spreadsheet Software 268
X. ALBE, J. AUGER, S. MARGULES, AND J.-C. BISCONTE. Measurement of Spermatozoal Motility over Prolonged Periods of Time Using Image Analysis 276
MAREK MALIK AND A. JOHN CAMM. The Pacemaker Inverse Problem—Computer Diagnosis of Paced Electrocardiograms 289

NUMBER 4, AUGUST 1988

S. QUAGLINI, M. STEFANELLI, G. BAROSI, AND A. BERZUINI. A Performance Evaluation of the Expert System ANEMIA 307

Gopa Avinash, J. Hurley Myers, and Charles A. Rawlings. A Computer Model to Study Norepinephrine-Induced Oscillations of Contraction in Tail Arteries of Spontaneously Hypertensive Stroke-Prone Rats 324
D. J. Potter. Parallel Algorithms for Querying Data on Two-Dimensional Electrophoresis Gels 334
Fernando J. Vega-Catalan. A Program for the Identification of Steady-State Processes in Biological Systems 343
Kim M. Albridge, Jim Standish, and James F. Fries. Hierarchical Time-Oriented Approaches to Missing Data Inference 349
Tom Bylander, Jack W. Smith, Jr., and John R. Svirbely. Qualitative Representation of Behavior in the Medical Domain 367
Von-Wun Soo, Casimir A. Kulikowski, David Garfinkel, and Lillian Garfinkel. Theory Formation in Postulating Enzyme Kinetic Mechanisms: Reasoning with Constraints 381

Number 5, October 1988

Francesco Pinciroli, Ruggero Rossi, and Lorella Vergani. Comparison of the Performances of an Automated Arrhythmia Detector Working on Original and Virtual ECG Tracings 405
Jeffrey R. Budd, Warren J. Warwick, Catherine L. Wielinski, and Stanley M. Finkelstein. A Medical Information Relational Database System (MIRDS) 419
Nico Karssemeijer, Leon J. Th. O. van Erning, and Eg. G. J. Eijkman. Recognition of Organs in CT-Image Sequences: A Model Guided Approach 434
J. R. Bock and A. A. Afifi. Estimation of Probabilities Using the Logistic Model in Retrospective Studies 449
John W. Gamel and Ian W. McLean. A Method for Determining the Optimum Transform for Covariates of the Cox Model with Application to 3680 Cases of Intraocular Melanoma 471
Susanne A. Seuchter and Mark H. Skolnick. HGDBMS: A Human Genetics Database Management System 478
Douglas Porter, Robert S. Wigton, Marie A. Reidelbach, Howard L. Bleich, and Warner V. Slack. Self-Service Computerized Bibliographic Retrieval: A Comparison of Colleague and PaperChase, Programs that Search the MEDLINE Data Base 488

Number 6, December 1988

Duane L. Sherrill, Bruce H. Dietrich, and George D. Swanson. On the Estimation of Pulmonary Blood Flow from CO_2 Production Time Series 503

Seppo Kalli, Juhani Grönlund, Heimo Ihalainen, Anja Siimes, Ilkka Välimäki, and Kari Antila. Multivariate Autoregressive Modeling of Autonomic Cardiovascular Control in Neonatal Lamb 512
Susan K. Seaholm. Software Systems to Control Sensitivity Studies of Monte Carlo Simulation Models 531
David B. Askey and Ira M. Herman. Computer-Assisted Analysis of the Vascular Endothelial Cell Motile Response to Injury 551
Howard A. Schwid. Electrocardiogram Simulation Using a Personal Computer 562
J. H. T. Bates, S. Janssens, T. X. Jiang, I. W. Hunter, and M. Decramer. A Subtractive Method for Decomposing Muscle Tension into Individual Twitches 570
Ronald G. Duggleby. The Application of Metabolic Resistance Theory to the Selection of Preferred Target Enzymes for Therapeutic Drugs 579
Chap T. Le and Bruce R. Lindgren. Randomization Using Packaged Programs 593
Charles J. MacLean and Jocelyn Kasamoto. Initial Values for Recalcitrant Logistic Regression Problems 597

Author Index for Volume 21 600

Information for Authors

Computers and Biomedical Research accepts papers for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Computers and Biomedical Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All manuscripts should be submitted to the Editor:

Dr. Homer R. Warner
Department of Medical Informatics
University of Utah School of Medicine
Salt Lake City, Utah 84132

Whenever a previously published paper by the author is important background for methods, data, or discussion in a manuscript, two reprints of the paper containing such material should accompany the manuscript to assist reviewers.

Manuscripts returned to authors for revision are considered "accepted for publication" as of the date an acceptable revised complete manuscript is returned to the editorial office. The editors and publishers cannot assume responsibility for manuscripts lost in the mail. Authors should therefore retain a complete copy for their files.

Form. Manuscripts should be typewritten and double-spaced throughout (including tables, footnotes, references, and figure captions); the original typescript should be prepared on one side of a good grade of $8\frac{1}{2} \times 11$-inch white paper, with 1-inch margins on all sides. Mimeographed or duplicated manuscripts will be accepted *if they are indistinguishable from good typed copies.*

Submit two complete copies in order to expedite processing of the manuscript. Each copy *must* include all figures and tables.

Number the pages consecutively. *Page 1* should contain the article title, author(s), and affiliation(s); at the bottom of the page type a short running head title not exceeding 45 characters (including spaces), and the name and complete mailing address (including zip code) of the person to whom proofs should be sent. *Page 2* should contain a short abstract, approximately 100 to 150 words in length.

Headings. The organization of the paper must be clearly indicated by appropriate headings and subheadings.

Abbreviations. Do not use final periods after abbreviations of measure (cm, sec, kg, etc.) in text or in tables, except for "in." (inch). Use the *ACS Style Guide*, 1986 (American Chemical Society) as a reference.

List of Symbols. A typewritten list of identified symbols should be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Equations. Number equations consecutively, with the number placed in square brackets to the extreme right of the equation. Refer to equations as Eq. [3] or simply [3] except at the beginning of a sentence, when the word Equation should be spelled out. Punctuate equations to conform to their place in the syntax of the sentence.

Footnotes. Use only when absolutely necessary, in which case type the footnotes consecutively, double-spaced, on a separate sheet of paper in the order of their appearance in the text. Use Arabic numbers 1, 2, etc. In the text refer footnotes by superscript 1, 2, etc. Footnotes to the title should be indicated by superscript*, †, etc.

Tables. Number tables consecutively with Arabic numerals in order of their appearance in the text. Type each table, double-spaced throughout, on a separate sheet; avoid vertical rules. Supply a short descriptive title below the table number. Type table footnotes, lettered *a*, *b*, etc., at the end of the table.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

It is essential that all illustrations be drawn with a lettering set, and therefore in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black. Photographs should be submitted as glossy prints (5×7 or 8×10 inches) and not marred by staples, paper clips, or pencil marks. Original drawings no larger than $8\frac{1}{2} \times 11$ inches are preferred.

Xerox copies are not acceptable.

Charges to authors. Exceptionally numerous illustrations or elaborate tables will require special arrangement with the publisher for sharing the cost of reproduction. Color figures or plates will be accepted only if the authors defray the cost.

References. These should be cited in the text by consecutive underlined numbers in parentheses and listed at the end of the paper in numerical order. Note the following style for book and journal citations:

1. Hess, C. F., and Brodda, K. On the optimum selection of diagnostic tests in computer-aided differential diagnosis. *Comput. Biomed. Res.* **17,** 389 (1984).
2. Sterling, T. D., and Perry, H. Computation of radiation dosages. *In* "Computers in Biomedical Research" (R. W. Stacy and B. D. Waxman, Eds.), Vol. 1, pp. 439–464. Academic Press, New York, 1965.
3. Winters, R. W., Engel, K., and Dell, R. B. "Acid Base Physiology in Medicine, a Self Instruction Program." The London Co., Westlake, OH, 1967.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the text as such, and should not be included in the reference list.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints will be supplied free of charge. Additional reprints can be ordered on the form accompanying the proofs.
